

CARRIER FOR FOOTWEAR

ABSTRACT OF THE DISCLOSURE

A convenient and efficient carrier for athletic shoes and the like is provided. The carrier has a connecting strap that is of a predetermined length. The connecting strap has two ends, with each end affixed to a quick release member. The quick release member is comprised of an engaging barrel portion and a heel barrel portion, with the heel barrel portion affixed to the end of the connecting strap. The engaging barrel portion is adaptable for connecting to a shoe that has a securing member inserted into the shoe's heel. The securing member has a tool portion and a receiving barrel portion, with the tool portion capable of boring a hole into the heel of the shoe and the receiving barrel portion allowing for connecting to the engaging barrel portion of the quick release member. Once the quick release member is connected to the securing member in the heel of the shoe, the carrier can be utilized to transport shoes.
